

# Ubuntu Server Installation

1. Open VirtualBox and select the newly created VM to highlight it, then click on “Start” to start the machine.

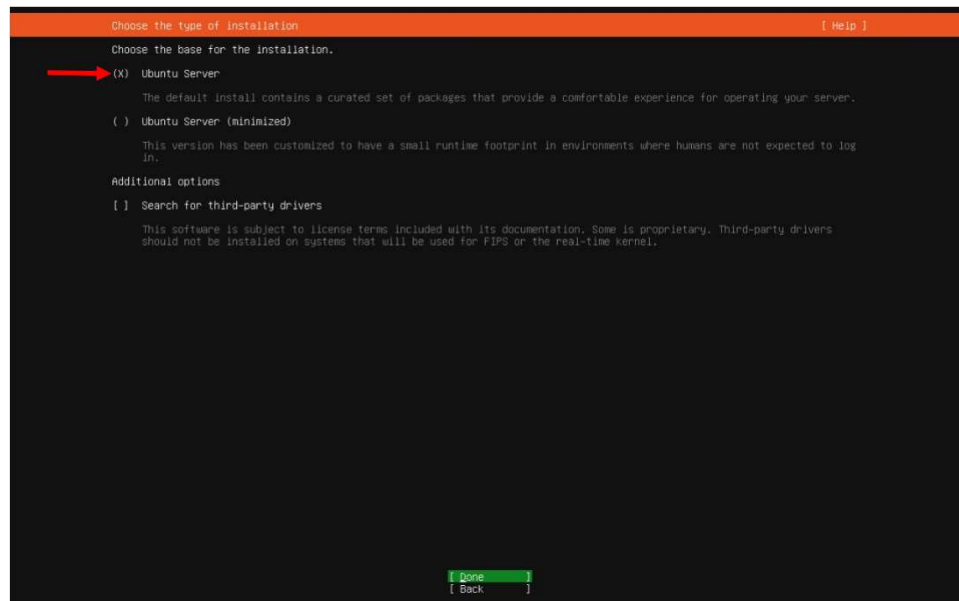

2. Use up and down arrows to select "\*Try or Install Ubuntu Server" and press enter

3. Use up and down arrows to select your language and press enter
4. Use up and down arrows to select your keyboard layout and select "Done" and press enter

5. On "Choose the type of installation" screen, ensure "Ubuntu Server" is checked, if not use up and down arrows and enter key to check it, then select "Done" and press enter

6. Press enter on "Network configuration" screen to accept the default settings
7. Press enter on "Proxy configuration" screen (This can be configured later if needed)
8. Press enter on "Ubuntu archive mirror configuration" screen to accept the default settings
9. On "Guided storage configuration" screen, use up and down arrows to select "Done" and press enter to accept the default settings
10. Press enter on "Storage configuration" screen to accept the default settings
11. On "Confirm destructive action" popup, use up and down arrows to select "Continue" and press enter

12. On "Profile configuration" screen, use up and down arrows and type the server name, username, and password you want to use (username and password is for the root user), then select "Done" and press enter

Profile configuration [ Help ]

Enter the username and password you will use to log in to the system. You can configure SSH access on a later screen, but a password is still needed for sudo.

Not required → Your name:

Required { Your servers name: j1tuebserver  
The name it uses when it talks to other computers.  
Pick a username: serveradmin  
Choose a password: \*\*\*\*\*  
Confirm your password: \*\*\*\*\*

[ Done ]

13. On "Upgrade to Ubuntu Pro" screen, ensure "Skip for now" is checked, select "Continue" and press enter

Upgrade to Ubuntu Pro [ Help ]

Upgrade this machine to Ubuntu Pro for security updates on a much wider range of packages, until 2034. Assists with FedRAMP, FIPS, STIG, HIPAA and other compliance or hardening requirements.

[ About Ubuntu Pro > ]

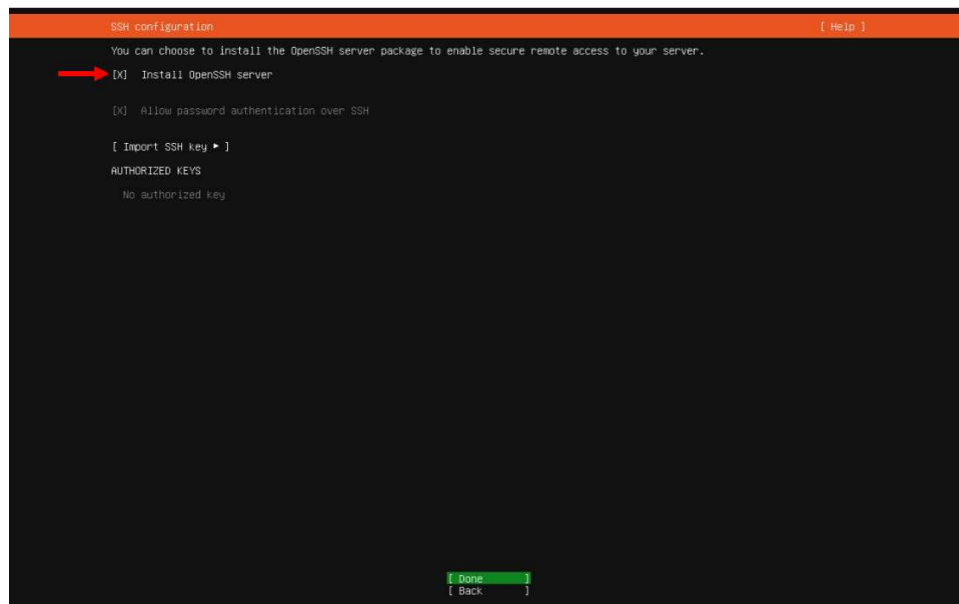

( ) Enable Ubuntu Pro

→ (X) Skip for now

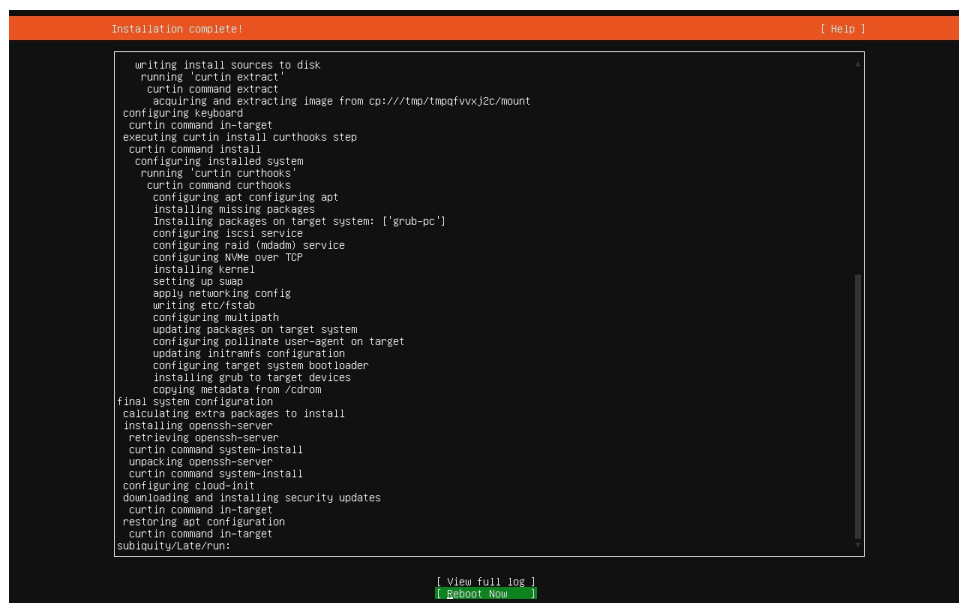

You can always enable Ubuntu Pro later using the 'pro attach' command.
